DEMOGRAPHY: Impact Goals and Objectives

The population is at the centre of decision-making

Finland is preparing for demographic change and committed to secure society's socio-economic sustainability

2

Population-related decision-making is based on researched information

3

Finland is an open and equitable society with high levels of public trust

THE EFFECTS of population ageing, low fertility, and migration on the population structure and the economy are recognised.

PUBLIC finances are improving and the labour force participation rate is rising. Work is continuing to improve the opportunities of immigrants and people with partial work ability to find employment.

RISING health care and long-term care costs are financed sustainably and care responsibilities are distributed fairly and equitably.

DECISION-MAKERS and public officials make good use of research data, forecasts and impact assessments.

THE SPECIAL needs and characteristics of population groups are recognised in decision-making.

ing and long-term impacts across electoral terms on population trends and their consequences.

in society are decreasing.

The consequences of how wellbeing is distributed are recognised and the value of supportive social networks is understood.

FINLAND'S receptiveness is improving. The structures of racism and discrimination are identified and being dismantled. Responsibility for integration is a two-way process between migrants and the host society.

are implemented to increase civic resilience, i.e. the ability of citizens to adapt to changes in society.
